The first implementation tranche.

A controlled way to run, measure and resume the pipeline, with source-backed work ready for review.

01 / OUTCOME

Verification stopped: protected test-cache writes

The three candidate stages completed. Engineering verification is incomplete.

The revised dependency inventory covered 247,333 files. The full holdings, matching and PIK stages then completed, with all 11 CSV/Parquet pairs agreeing.

780,425	497,451	68
Candidate holdings rows	Assigned position matches	Focused tests passed before the full suite

The full test suite reached its time limit, with **four failure markers** and no final traceback. The earlier handoff incorrectly counted one. Its outer guard found **six new empty query-cache files** in a protected output folder. The agreed stop rule therefore applies. All 237,621 pre-existing protected files retained their size and modification time; that is not a full content-hash proof.

A test fixture redirected one output directory but missed a separate DuckDB cache. A fix now sends those caches to temporary test folders and gives orchestration tests synthetic query sources. The subsequent bounded investigation verified these repairs; see its results below.

Integrated financial measurements and the actual recovery drill did not run. All 50 programme metrics below remain UNMEASURED. Stage row counts and matching file formats do not establish financial accuracy.

The six files total 9,580 bytes and remain in place. Automatic approval review rejected their removal as "blocked by policy"; no further reason was supplied. Forensic copies and hashes are preserved.

Read the handoff and preservation limits / Read the revised proposal and outcome

What the subsequent investigation found

All four failures reproduced: three tests expected outdated wrapper versions, and one validator checked DuckDB regexes using Python syntax. The stale expectations and test-cache isolation are repaired. The production regex validator still needs its correction.

61 targeted tests passed; one known validator test still failed. Four representative staging/integration cases were checked. The broader 59-case class did not fit the diagnostic budget and was stopped with its completed results retained. No protected-output files changed during these diagnostic jobs. The full suite has not been rerun.

The slow fixtures repeatedly processed a large production overlay. The two profiled examples improved from about 170 seconds each to 80.7 seconds and 74.1 seconds. Staging still has substantial processing cost. These are instrumented diagnostic timings, not a prediction of total suite runtime.

The diagnostic controller now saves failures immediately and checks the worker result and JUnit, because launcher success alone proved unreliable.

Read the investigation, evidence and remaining work

Independent source review is still pending. No reviewer has been appointed and none of the development labels has been promoted to acceptance evidence.

[Keep this draft if storage fails.]

02 / IMPLEMENTATION

Completed work can be verified and reused.

- The candidate runner freezes inputs and dependencies, isolates writes, and verifies each holdings, identity and PIK stage before marking it complete.
- CSV and Parquet companions must agree, including duplicate counts. Failed or incomplete stages cannot be mistaken for usable results.
- The evaluator records all 28 criteria against versioned working targets. Missing evidence stays visibly unassessed.
- Target amendments retain old and proposed results on the same candidate. Original gold and live thresholds stay under their existing authority.

This tranche establishes controls. The schema, rate, persistent-identity and dbt migrations remain subsequent implementation packages.

▼ **Execution and verification evidence**

All three isolated candidate stages completed. Full pytest timed out with one failure marker and six new empty protected query-cache files. The tranche is stopped. The test-isolation fix is prepared but untested; integrated measurement and recovery did not run.

```

03 / PRIORITIZED WORK

Four bounded fixes, with explicit counterexamples.

These are implementation proposals. Their expected changes have not been applied to the candidate.

▼ 26North: untagged four-position schedule

Source schedule is present as literal HTML while candidate has zero rows. Add governed per-CIK extraction for this accession and table; do not synthesize missing XBRL facts.

Positive case: Penn first-lien term loan: FV 24,720,000 USD; separate delayed-draw FV 264,000 and revolver FV -78,000.

Counterexample: The table total repeats the four-lot sum and is not a fifth position. Three Penn facilities are not one borrower position.

Expected change: absolute fv usd: 52722000; known cost usd: 52628000; rows: 4; signed fv usd: 52566000

Must remain true: Other CIK/quarter row multisets and values unchanged; four unique source rows; preserve the negative revolver; source total and independent lot count both reconcile.

Rule location: Per-CIK HTML extraction/staging configuration; shared parser only for a demonstrated general mechanism.

Unresolved: Principal dash does not automatically mean zero. Required-quarter coverage beyond this accession remains unproved.

▼ Golub: retain a named money-market holding

A named Treasury Portfolio instrument is a position even though it is cash-like. Existing staging/reconciliation has intentional money-market exclusions; the accepted target requires a scoped contract change, not a fund-total overlay.

Positive case: Morgan Stanley Institutional Liquidity Funds Treasury Portfolio, CUSIP 61747C582, FV/cost 650,323,000 USD.

Counterexample: Do not add the repeated schedule total as a second position, or turn an undifferentiated cash balance into an invented security. Do not apply this amount to another quarter.

Expected change: classification: named money-market fund / cash equivalent; cost usd: 650323000; rows: 1; signed fv usd: 650323000

Must remain true: Same one holding contributes once to each public partition. Primary investment anchor uses an explicit cash bridge; other quarters and ordinary cash balances unchanged.

Rule location: Per-CIK cash-instrument extraction plus explicit global retain-named-instrument contract; review existing add_2025q4_money_market_rows mechanism before generalizing.

Unresolved: An investment-only primary anchor may exclude cash equivalents; adding the holding without a scope bridge would create a misleading reconciliation error.

▼ Lord Abbett: recover schedule while preserving unresolved dashes

The source has a complete 33-position/facility schedule and candidate has zero rows. Extract the reviewed schedule; six FV dashes retain unknown numeric meaning until separately resolved.

Positive case: RJW funded position has reported FV 2,880,000 USD. The separately disclosed RJW revolver has an FV dash and remains a separate observation.

Counterexample: Do not convert six dashes to six zero-FV facts because the 27 known amounts happen to sum to the printed total. Do not include the total row as a holding.

Expected change: known absolute fv usd: 314430000; known fv rows: 27; known signed fv usd: 313562000; monetary recall: unassessable until missing weights are resolved; rows: 33; unresolved

fv rows: 6

Must remain true: Keep negative facilities; source roster count 33; all 27 known FV values match; all six dashes remain unresolved; no fabricated zero and no claimed full FV recall.

Rule location: Per-CIK wrapper/HTML staging configuration; shared availability-state contract for displayed dashes.

Unresolved: Equal aggregate totals cannot prove each omitted value is zero; broader historical schedule extraction remains separate.

▼ **Ivy Hill: distinguish operating-company equity from a credit fund**

Member interest is equity in an operating asset-management business. Current PRIVATE_CREDIT_FUND and legacy PRIVATE_EQUITY_FUND labels both miss that business role; legal form alone does not identify a pooled fund.

Positive case: Ivy Hill member interest: source cost 1,700,500,000 and FV 1,903,400,000 USD, context c-413.

Counterexample: BCRED Emerald JV LP is a disclosed senior-secured lending joint venture (FV 1,678,745,000 USD); its LP interest must remain a credit-vehicle exposure.

Expected change: from role: private_credit_fund; precise equity leaf: unresolved pending rights evidence; reclassified fv usd: 1903400000; rows: 0; to role: operating_company_equity; total fv usd: 0

Must remain true: FV/cost/source identity unchanged; public total unchanged; classification partition shift equals 1,903,400,000; Emerald and other genuine credit vehicles unchanged.

Rule location: Evidence-backed per-investee business-role decision scoped to filer/source observation; then governed instrument/asset classification. No global LP/LLC/member-interest keyword override.

Unresolved: Do not turn business-role evidence into an unsupported GICS leaf or common/preferred rights claim.

Four schedules and 20 label proposals.

Check the literal filing passages, position boundaries, currencies, units and unknown values. The proposed interpretations are shown for review. Comments do not automatically approve, relabel or publish anything.

All examples have been exposed during development. Even after review, this set cannot certify an unbiased sampled accuracy estimate for the whole portfolio.

▼ **Bain Capital Private Credit / 2023-06-30 / 2 proposed holdings**

Two distinct equity positions. Repeated totals and affiliation summaries are not extra holdings.

> State Street Institutional U.S. Government Money Market Fund - Premier Class | 3.74 % | 305,986 | 305,986 | 0.64

`/html/body/div[1208]/table/tr[29]`

▼ **LABEL-08 / Pioneer JV Holdings LLC, Common equity**

legacy parent label compatible leaf supported

Current SOI common-equity category supports the common leaf; issuer contains JV but its name alone does not define a fund instrument.

Original label: DIRECT_EQUITY

Proposed interpretation: {"classification": "COMMON_EQUITY"}

Open the cached source filing

> Pioneer JV Holdings LLC (1)(5)(6) | 10/2025 | 49 | 731,872 | 753,613 | (2)

`/html/body/div[2331]/table/tr[21]`

▼ **LABEL-09 / Tango Holdings LLC, Common equity**

legacy parent label compatible leaf supported

Current SOI common-equity category supports the common leaf.

Original label: DIRECT_EQUITY

Proposed interpretation: {"classification": "COMMON_EQUITY"}

Open the cached source filing

> Tango Holdings LLC (1)(5)(6) | 07/2025 | 488,168 | 492,623 | 526,684 | (2)

`/html/body/div[2331]/table/tr[23]`

▼ **LABEL-10 / Aspen Renewables Equity Holdings LLC, Common equity**

legacy parent label compatible leaf supported

Current SOI common-equity category supports the common leaf.

Original label: DIRECT_EQUITY

Proposed interpretation: {"classification": "COMMON_EQUITY"}

Open the cached source filing

> Aspen Renewables Equity Holdings LLC (1)(5) | 03/2025 | 4,900 | 431,267 | 479,667 | (2)

`/html/body/div[2331]/table/tr[20]`

▼ **LABEL-11 / Denali Equity Holdings LLC, Other equity**

candidate leaf not supported

Current schedule places Denali above Total other equity, separately from common equity. Prior Class A units do not establish current common rights.

Original label: DIRECT_EQUITY

Proposed interpretation: {"classification": "OTHER_EQUITY", "leaf_rights": "not established"}

Open the cached source filing

> Denali Equity Holdings LLC (1)(5) | 09/2024 | 3,749 | 340,995 | 354,399 | (2)

`/html/body/div[2331]/table/tr[15]`

▼ **LABEL-12 / ULTRA III, LLC - LLC Interest**

candidate semantics wrong

Narrative describes unitranche loan JV with Capital One; LLC interest is credit-vehicle exposure.

Original label: PRIVATE_CREDIT_FUND

Proposed interpretation: {"classification": "PRIVATE_CREDIT_FUND", "fair_value_usd": 416244000}

Open the cached source filing

> ULTRA III, LLC (5)(20)(22) - LLC Interest | $ | 402,400 | $ | 416,244

`/html/body/div[2115]/table/tr[10]`

▼ **LABEL-13 / Sentinel Buyer Corp. 2**

reference scope and instrument wrong

Legacy gold used a JV delayed-draw negative mark for a parent first-lien term position. Source scopes and facilities must differ.

Original label: DIRECT_LENDING

Proposed interpretation: {"legacy_jv_cost_usd": -190000, "legacy_jv_fair_value_usd": -188000, "parent_cost_usd": 255050000, "parent_fair_value_usd": 254664000}

`/html/body/div[1451]/table/tr[20]`

▼ LABEL-16 / Fifth Season Investments LLC | Specialty finance equity investment

leaf unresolved and cost reference wrong

Specialty finance equity supports broad equity; does not by itself establish common rights. Current cost is 310.978m.

Original label: DIRECT_EQUITY

Proposed interpretation: {"cost_usd": 310978000, "fair_value_usd": 344960000, "leaf": "unresolved"}

Open the cached source filing

> Fifth Season Investments LLC(3)(4)(24)(30) | Specialty finance equity investment | N/A | N/A | 31 | 310,978 | 344,960

`/html/body/div[1451]/table/tr[20]`

▼ LABEL-17 / LSI Financing LLC | Specialty finance equity investment

reference join scope ambiguous

Two matches must be separated by physical scope: current SOI equity versus unfunded commitment. Same name is insufficient.

Original label: PRIVATE_CREDIT_FUND

Proposed interpretation: {"cost_usd": 296883000, "fair_value_usd": 321093000, "unfunded_table_xpath": "/html/body/ix:continuation[52]/div[1]/table/tr[42]"}

05 / ACCEPTANCE

Every criterion keeps a result.

▼ A1 / Fund-quarter obligations UNASSESSABLE

obligation coverage	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

unknown lifecycle count	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ A2 / Position roster completeness and purity UNASSESSABLE

roster fv recall	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

roster fv precision	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

roster row recall	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

roster row precision	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

fund roster fv floor	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

fund roster row floor	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ A3 / Source selection UNASSESSABLE

source selection errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ A4 / Supplemental source disposition UNASSESSABLE

supplemental disposition coverage	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ A5 / Accounting scope UNASSESSABLE

accounting scope errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ B1 / Target field semantics UNASSESSABLE

target field contract errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ B2 / Field fidelity UNASSESSABLE

amount field accuracy — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

other field accuracy — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ B3 / Independent primary reconciliation UNASSESSABLE

primary absolute error ratio — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

fund primary error ratio — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

primary fund coverage — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

primary source fv coverage — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ B4 / Exact public holdings partitions UNASSESSABLE

public partition errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ B5 / Rate and PIK meaning UNASSESSABLE

rate pik contract errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ C1 / Stable entity identifiers UNASSESSABLE

stable entity id errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ C2 / Entity resolution accuracy UNASSESSABLE

entity precision	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

entity recall	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ C3 / Position continuation and full chains UNASSESSABLE

position precision	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

position recall	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

complete chain rate	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ C4 / Position identity lifecycle UNASSESSABLE

position lifecycle errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ D1 / Field and metric evidence categories UNASSESSABLE

evidence contract errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ D2 / Enrichment replay UNASSESSABLE

enrichment replay errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ D3 / Sector quality and availability UNASSESSABLE

sector accuracy	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

sector fv coverage	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

sector row coverage — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ D4 / Citation scenarios UNASSESSABLE

citation scenario errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ D5 / Evidence coverage UNASSESSABLE

reported amount highlight fv coverage — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

reported numeric highlight row coverage — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

evidence path or unavailable — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

misleading links — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ E1 / Complete product holdings access UNASSESSABLE

accessible holdings difference — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ E2 / Analytic definitions and denominators UNASSESSABLE

analytic display errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

▼ E3 / Public scope and performance UNASSESSABLE

public scope errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

product workload errors — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

local citation p95 ms — Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

F1 / Authoritative writers and dbt execution UNASSESSABLE

writer authority errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

F2 / Repeatability and typed parity UNASSESSABLE

semantic repeat delta	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

companion difference	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

F3 / Partial failure and adoption boundary UNASSESSABLE

release failure scenario errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

F4 / Recovery and idempotency UNASSESSABLE

resume scenario errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

F5 / Protected acceptance assets UNASSESSABLE

acceptance control errors	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

F6 / Migration deltas and regressions UNASSESSABLE

unexplained migration delta	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

signed quarter regressions	Not measured / UNMEASURED

Not executed: protected test-cache writes stopped the tranche after the three candidate stages completed.

Measurement definitions / Working targets

This briefing is a review companion, not a production dashboard or a source-citation product. Source amounts and label proposals retain their development status. The execution record and hashed artifacts are the detailed evidence.
